Perito is an innovative embroidery software package that has been developed by a team of programmers with almost 20 years experience in the industrial embroidery industry. Perito is both user-friendly and extremely powerful. Its comprehensive on-line help with inclusive tutorials means you will be producing beautiful, decorative embroidery designs immediately.

Perito offers an easy to use, comprehensively featured embroidery package at an affordable price.

Unlike other software packages Perito has all the features integrated into a single module making it easy to use.

Comprehensive on-line help - Printed Manual - Video demonstrations

The Complete Embroidery Software Solution

Automatic lettering is contained within Perito's single module and is fully customised to suit your individual design requirements.

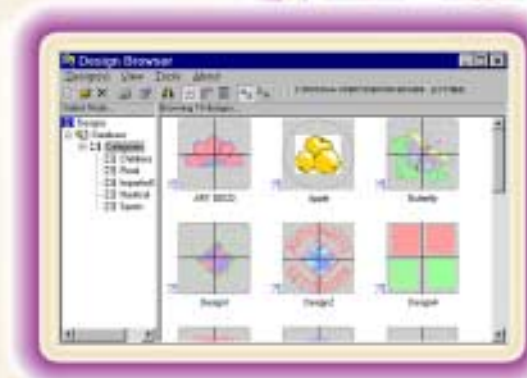

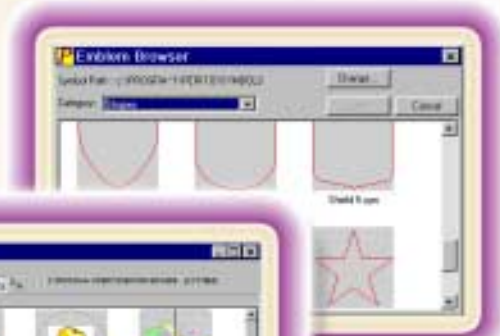

Choose From A Large Selection of High Quality Lettering

Even after lettering has been added to a design there is still unlimited editing capabilities. You can change the size, style spacing etc. The outline points of your lettering can be manipulated.

DISTORT

Design Storage

Organise and view all your designs in the visual integrated database. Save all the information you need with each embroidery design.

A selection of useful shapes are included.

Convert clipart to embroidery using the automatic conversion tools.

Perito will generate an embroidery outline around bitmaps with a click of a button

OVER 200 ADJUSTABLE STITCH EFFECTS

Choose the effect library to suit your fabric.
